## Headache & Migraine Preventing Sunglasses

- AuraVision lenses have passed FDA inspection for impact resistance that meet ANZIZ80.3UV protection standards
- Eliminate headache pain or prevent it from starting, successfully for 75 % of AuraVision wearers
- Filter certain light waves which trigger headaches - over 70% of headaches are triggered by light
- Absorb 100% of harmful UVA & UVB rays
- Reduce infrared rays before they reach your eyes
- Filter color while maintaining high levels of visible contrast

The goal is to ease the pain of headache without the use of drugs.

**AuraVision SunGlasses** are essentially a very special pair of sunglasses that are designed especially for headache sufferers. They effectively alter light waves before they reach your eyes and have been shown to reduce or even eliminate headache pain.

A Wave Frequency engineer in the United States whose research work in the past has included wave theory and radio frequency engineering, still-classified work as a design scientist with the US Department of Defense and as a Science Contractor for the Department of Energy is also a professor of Electro-Physics, developed these very uniquely designed and coated lens that alters a particular frequency group of light waves that are believed to trigger many types of headaches including migraines.

According to the inventor, “The lens is designed to [alter the actual wavelength \(or frequency\) of certain light waves](#) so they never reach the rods and cones on the retina at the back of the eye. And, it's not just a single frequency of wave, but it is certain wave harmonics that may be creating the problem.”

He goes on to explain, “From the rods and cones, information is sent through the optic nerve to the visual cortex where it is interpreted by the brain as sight. The theory is simple. If a certain group of waves are the culprit for headaches, why not create a lens that blocks or alters those specific light waves and prevents them from ever reaching the inner workings of the human eye? The results have been startling.”

Finally, he concludes: “One thing is certain, if light is not a trigger, it is absolutely a cause of increased sensitivity and pain once a migraine, or any headache for that matter, has begun. The flight to darkness is a universal among headache sufferers. Does it not make sense that if sensitivity and pain is enhanced by light waves? By eliminating those light waves a decrease in pain will result.”

He is correct! [Thousands of satisfied customers in the United States and Canada have had tremendous relief from the pain of headaches and migraines, WITHOUT the use of medication!](#)
