CLEANING THE EXTERIOR OF YOUR PROMEDUSA OZONE GENERATOR

- For all ProMedUSA Ozone Generators with a WHITE exterior (4mm PVC) we recommend Soft Scrub (left) or the local equivalent CIF (which you can buy at NTUC). Soft Scrub works the best but it's harder to find. Just apply with a soft terry cloth rag and wipe off. Your ozone generator will look like new. It will remove all scratches, scuffs, dirt, etc.

- For ProMedUSA Ozone Generators with a brushed stainless steel exterior we recommend Bar Keepers Friend (right). It will clean up the outside nicely, and remove dirt, scratches with just a soft terry cloth rag and a little rubbing. There is a local CIF product for stainless steel you can find at NTUC which works, but not as nicely as Bar Keepers Friend
