

DETAIL LAB, SINGAPORE

UV SG600T36 MINIPRO PET ODOURS

Detail Lab, 8 Kaki Bukit Ave 4 is one of Singapore's finest automobile detailers. On any particular day you might see a classic antique Volkswagen or a 2016 Aston Martin being worked on.

Benedict Yap, the owner, is a perfectionist – he knows exactly what product to use to bring out absolute perfection in your automobile. He uses only the finest materials and has a keen preference for a very exclusive product called Swissvax.

Benedict had an Audi SUV whose owner was a serious dog lover – he had to be very serious, as his SUV smelled almost like a kennel! Benedict had done his homework, and gave us a call to see whether or not we could remove the doggie smell from this otherwise beautiful car.

Initially, we placed our UV SG600 inside the car, rolled up the windows, turned on the aircon, and let the ozone generator work for 30 minutes. Then, we waited another 30 minutes for the ozone to do its work, and then revert back into simple oxygen. Finally, we placed the SG600 on the bonnet of the Audi (photo above), turned on the aircon again and allowed the ozone to be sucked through the aircon system – cleaning out any remaining doggie smells, plus any mould or mildew inside the aircon.

The end result – a beautiful car with just a fresh clean smelling interior. No more pet smell.
