Manual cleaning of your ice machines using chemicals is difficult, time consuming and unreliable. The Biofilm, and Slime inside are hard to completely remove. They will continuously breed dangerous pathogens like Salmonella, E. coli, Legionella, Norovirus, Hepatitis, Candida that contaminate the ice maker and the ice.

THE IClean FLO is an affordable, chemical free, and sustainable Ice Machine Disinfection System that gently and continuously dissolves ozone (activated oxygen) into the incoming water supply. This safe, FDA and USDA approved natural disinfectant quickly kills those pathogens and prevents the biofilm and slime from reoccurring.

The IClean FLO has been tested and proven effective by TUV, and other recognized testing laboratories. It is quickly installed and is capable of treating any brand of ice maker with up to 1,800 pounds (820Kg) per day capacity

See the difference between chemical cleaning and ozonated water cleaning

IClean FLO Results in a 5 Star Hotel's Ice Machine

5 Star Hotel before and 30 days after installing IClean FLO

Dimensions	131 X 104 X 175 mm; 530 gm
Power supply	Universal; 100 W
Water line connection	3/8" Push Fit
Water Pressure	0.02 MPa – 0.40 MPa
Flow Rate	1 – 8 L/min
Ozone Concentration	0.5 – 1.7 ppm
Water Temperature	4 – 40 C
